PrevenTest™ is a non-invasive cancer risk pre-disposition test analyzing 31 genes linked to 8 of the most prevalent and devastating solid tumor hereditary cancers:

- Breast
- Ovarian
- Colorectal
- Endometrial
- Prostate
- Pancreas
- Stomach
- Skin

Test Performed with a Simple mouth rinse and Buccal swab

Hereditary Cancer Risk predictive testing is covered by Medicare and many insurance plans

Genetic Consultation services are available for test results analysis and preventative planning

Results returned within 7-9 business days
